RE: Proposed project for Vero Networks in Town of Castle Rock public ROW as follows:

Project will consist of 700 linear feet of proposed (2)-1.25" fiber optic conduit installation within The Town of Castle Rock public-right-of way via directional bore. A handhole will be placed on either side of the proposed alignment to house fiber optic cable. Minimal disturbance will take place within the public r.o.w. and all impacted areas will be restored back to existing conditions. Project location falls on Castle Oaks Dr. between Arabella dr. & N. Hwy. 83 crossing Cherry Creek. This section will be the first phase of Vero's planned fiber optic build out within The Town of Castle Rock public right-of-way to have pathway under the environmentally sensitive cherry creek area. The next phase will be a continuation of fiber optic directional bore approx. 2,000 feet East to Hwy 83 and West approximately 11,500 feet to feed small cellular nodes within Cobblestone Ranch. See exhibit 1a below for Veros planned fiber optic path within The Town of Castle Rock public right-of-way.
